The initial load and maximum load varies depending on the temperature and operation speed. The load error is ±10%.

For the specifications of plates, refer to the page at right.

If a gas spring is used in excess of the specified stroke range, gas leakage will occur and the piston rod will not return. Make sure to use the gas spring within the specified stroke range so that it does not contact the overstroke check pin.

When measuring GSZ50, 38, 56, or 63, be sure to use the file mounting holes and two bolts.
